Kaba penta

The Star among Kaba Master Key Systems

High Security Standard

Mechanical security reaches new levels with Kaba penta

Kaba penta is a highly safe and efficient master key system, that is particularly suitable for complex, sophisticated master key plans.

The high security level of Kaba penta is built on its five radially arranged rows of tumbler pins with up to 22 simultaneously usable pin positions as well as the patented arrangement of the tumbler pins to key milling.

All pairs of tumbler pins are variable in several stages and are not subject to any mutual variation restrictions.

All tumbler pins are made of hardened steel and are chemically nickel plated.

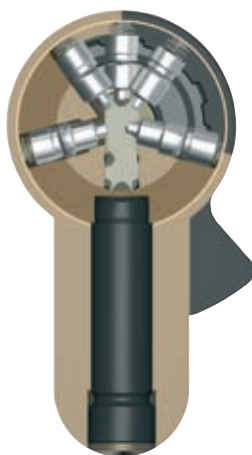

The use of specially formed tumbler pins further increases anti-picking security, even when using the most modern tools.

Besides this, the block lengths of tumbler pin pairs are always identical. Closer examination of the key reveals numerous drillings and milling of the key, with numerous depths and inclinations.

This alone demonstrates the high security level of the Kaba penta locking system.

Technical Data

- 5-row reversible key system
- Steel insert available
- High combination performance for large and complex master key plans guaranteed
- International patents and approvals
- Standard bow clip dark red. 12 different colors are available upon request
- Combinable/Upgradeable with/to Kaba Legic®/elologic

Thumbturn cylinder

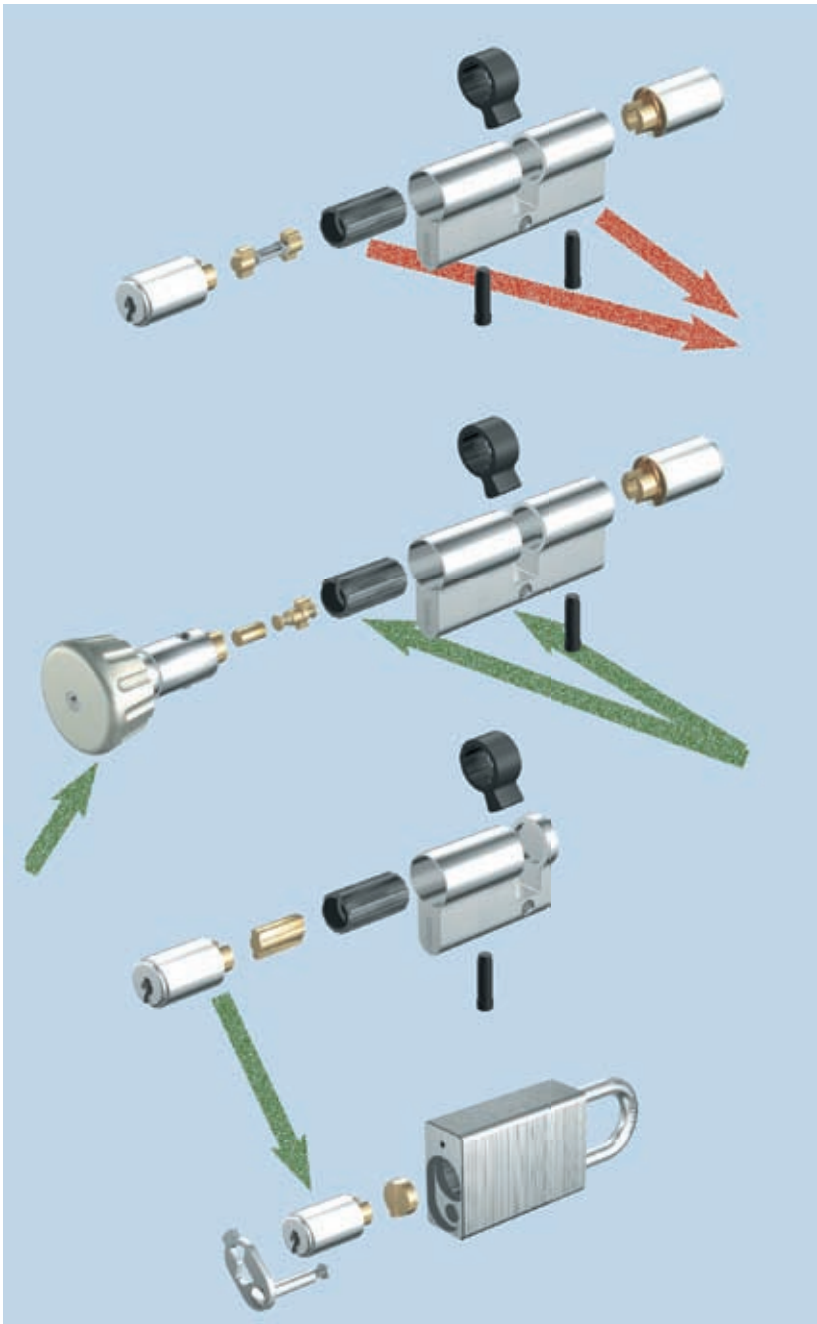

Double cylinder

Single cylinder

Kaba Modular increases Flexibility and Variability on Site

Investment security and upward compatibility

of products previously purchased has always been an important topic - and a substantial characteristic that sets Kaba apart.

Kaba reversible key systems are modular, and allow quick and simple retrofitting of cylinders to different lengths and types.

In combination with different cylinder housing lengths (complete housings), couplings and cams, it is possible to quickly and easily convert previously supplied cylinders with other lengths and/or functions.

The concept of modularly exchangeable inserts allows installation of penta inserts in various cylinder types: single cylinders, knob cylinders, outdoor cylinders, furniture cylinders, padlocks and many more.

Kaba modular expands the service capabilities of authorized dealers, increases flexibility of the system and provides the end user a high level of investment security.

The KABA logo is displayed in a bold, stylized, blue font. The letters are thick and blocky, with a registered trademark symbol (®) positioned at the top right of the letter 'A'. The logo is centered within a white rectangular box.
